3. Import hand history from GGpoker.....	4
4. Working with the program.....	11

### 1. About

GGpoker SSD - This is a free automatic tool that collects statistics from downloaded hand histories from the GGpoker network's PokerCraft tool. SSD shows Spin&Gold tournaments statistics for both 3 max and 6 max formats. Works on Windows.

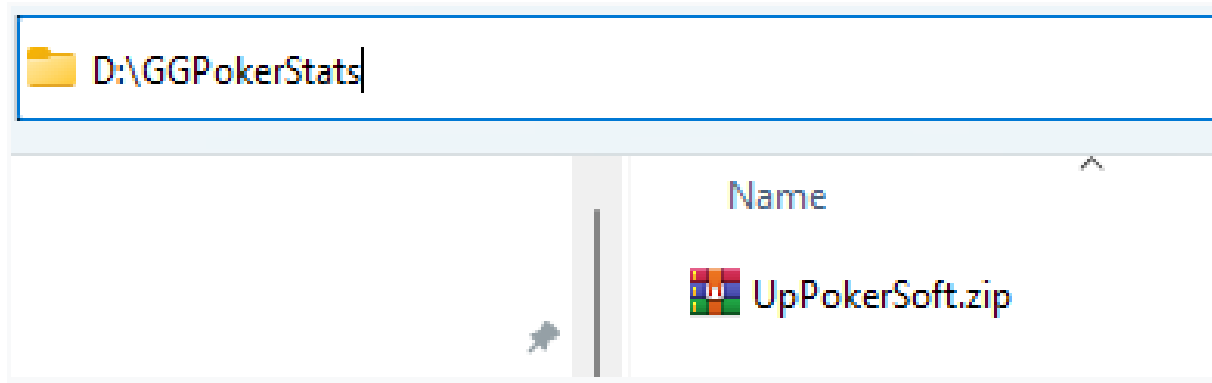

All you need is to click on the .exe file icon and the program itself will build statistics through your browser, selected by default.

GGpoker SSD includes not only general key indicators such as ITM, ROI, number of tournaments played, but also additional ones such as multipliers won and buy-in split.

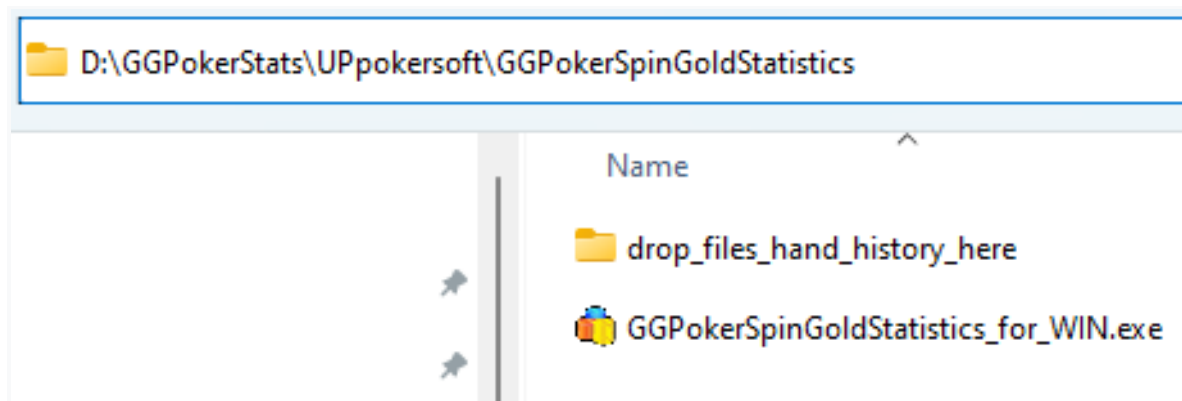

## 2. Installing the program

The program is downloaded from the source as a “UpPokerSoft.zip”. You choose any location on your computer disk where you want to import your hand histories from PokerCraft.

Let's imagine that we created a folder “D:/GGPokerStats” and want to use the program in this folder. All we need to do is move the “UpPokerSoft.zip” file to this folder and extract the contents. Right click on file and choose “Extract All”.

*Pic1. Move to folder*

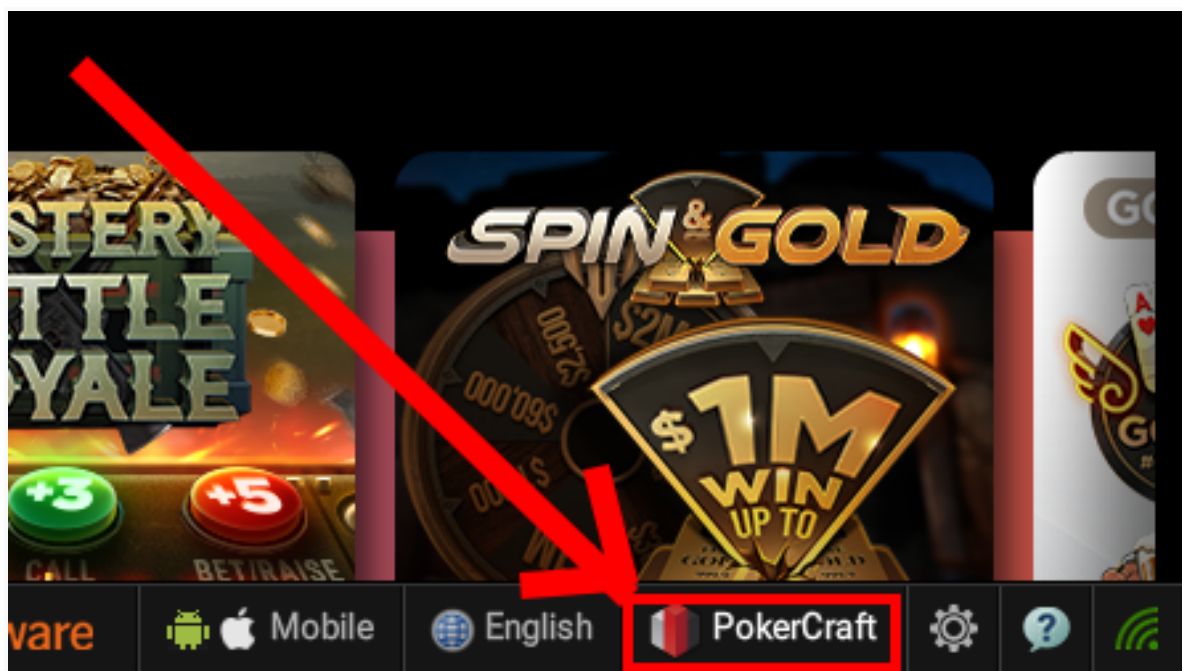

*Pic2. Contents after extraction*

So after extraction we see in the second picture two objects: a folder and file. We will save our hands from PokerCraft in the “*drop\_files\_hand\_history\_here*” folder. And then click on the “*GGPokerSpinGoldStatistics\_for\_WIN.exe*” file. And the program will automatically display statistics of our hands.

Remember! That collecting statistics takes time.  
The more hand histories folders you have - the more time it takes.

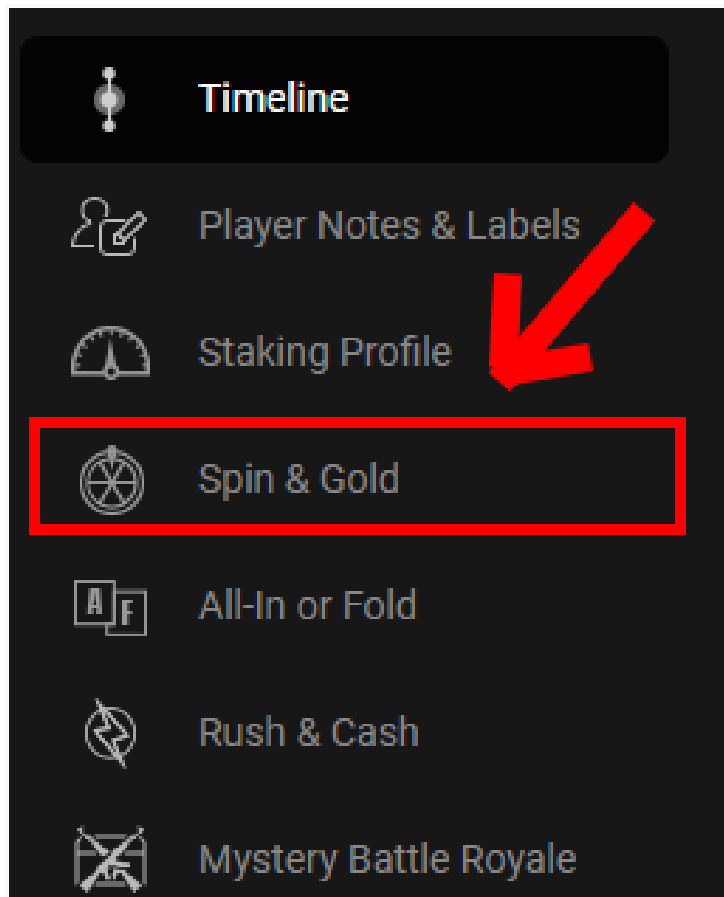

### 3. Import hand history from GGPoker

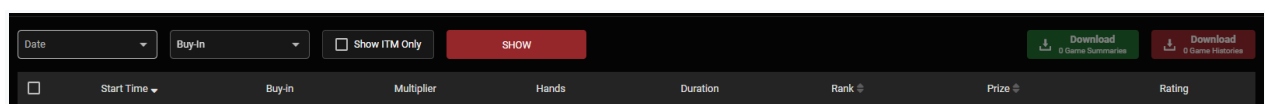

*Pic3. Looking for PokerCraft in main lobby*

The first thing we need to do is get into PokerCraft. Go to the main lobby of GGPoker and at the very bottom on

the right we need to click on “PokerCraft”. Then a page will open in the browser where there are different statistics for all your games. We need to select “Spin&Gold”.

*Pic4. Select Spin&Gold variant*

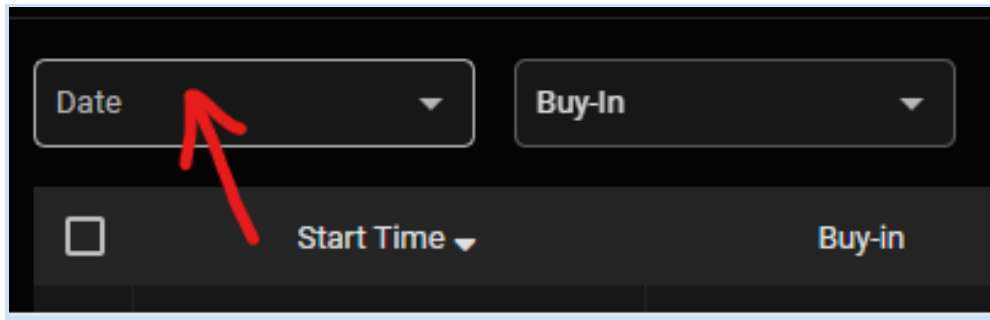

*Pic5. The part we need at general view*

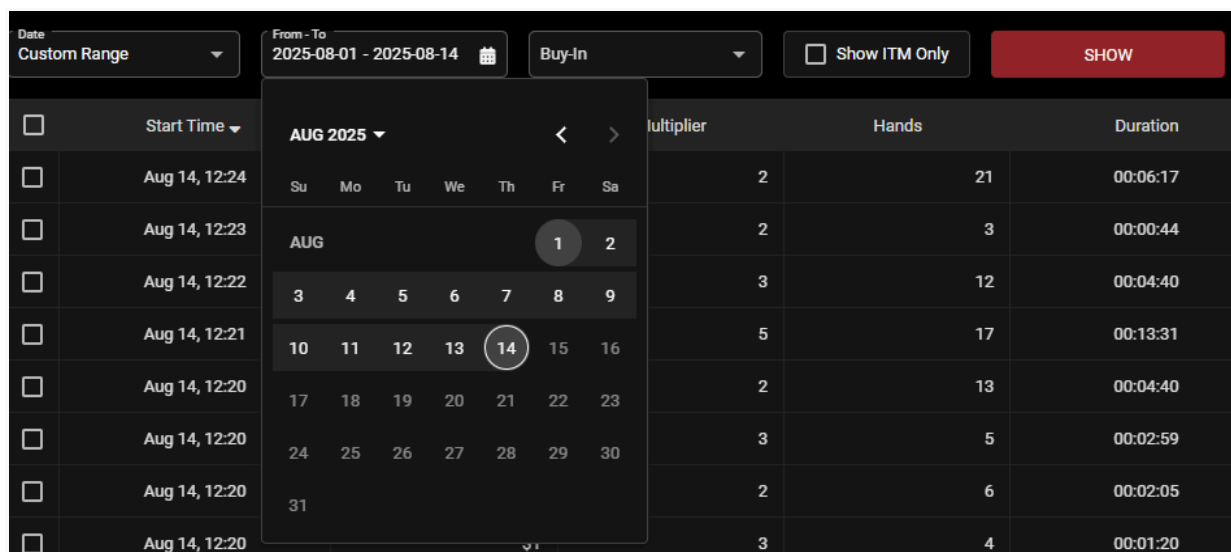

After we clicked there the following window opens, where your hand history is shown

We only need this part, where we select the date.

Click to “Date” and select “Custom Range”

*Pic.6 Choose “Date”*

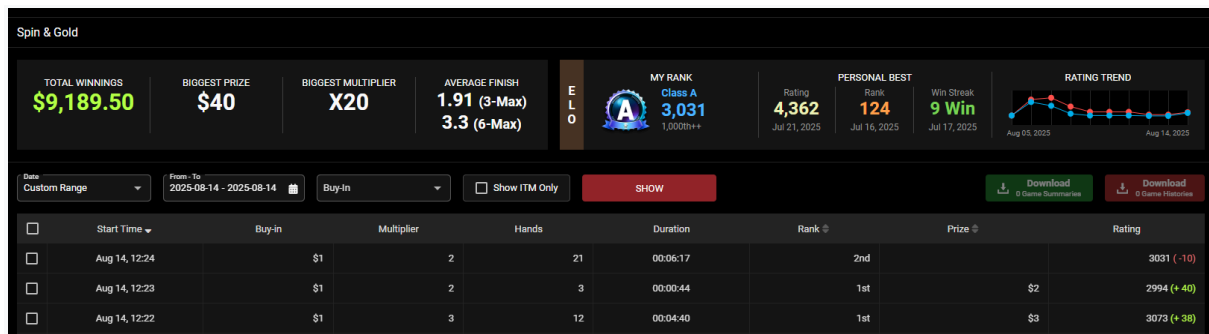

*Pic.7 Select Date Range*

Select the time you are interested in to analyze the hands played during this period.

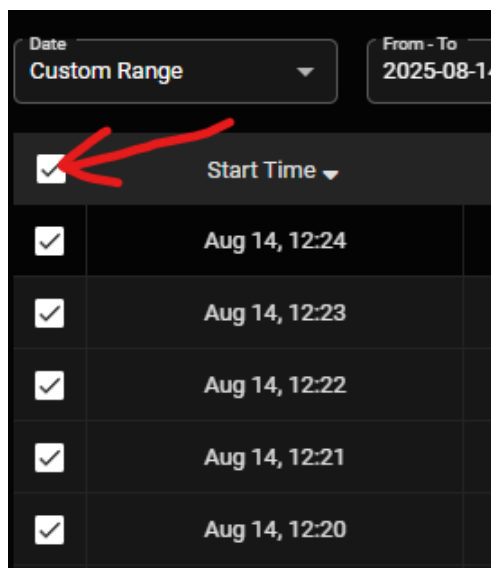

After that you can select the buyins you are interested in. But our program itself separates statistics by buyins and ITM, so you can skip other tabs.

After that, click the red “SHOW” button on the right.

You will see something similar to picture “8”.

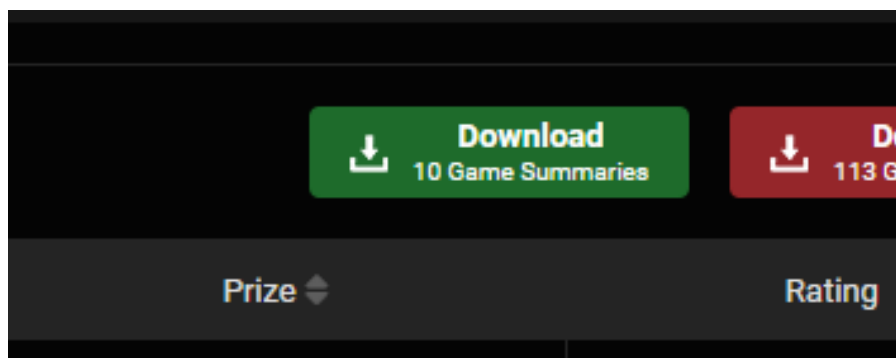

*Pic.8 The screen after we pressed the “SHOW” red button*

*Pic.9 Click the checkbox*

Now, to download the entire hand history for this period, we just need to select one checkbox and the entire column will be selected by itself. Click the checkbox to the left of start time.

Now when all checkboxes are selected click on the green button “Download”.

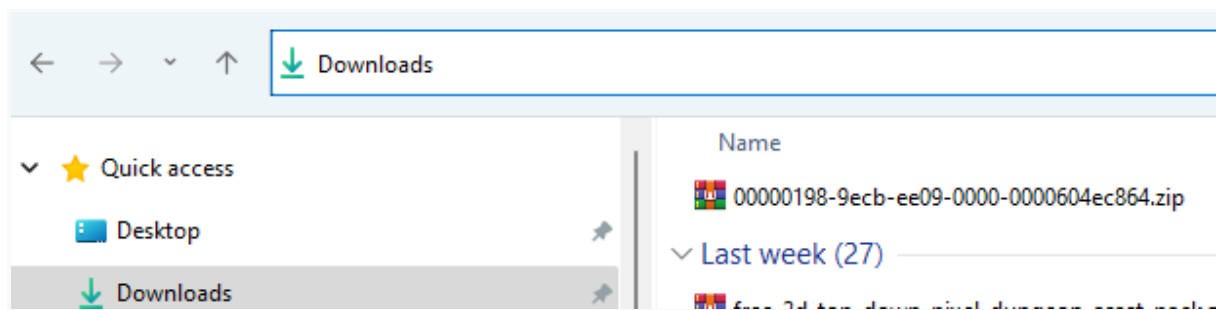

*Pic.10 Download Game Summaries*

The automatic download will start via your browser to the standard downloads folder in the Windows system.

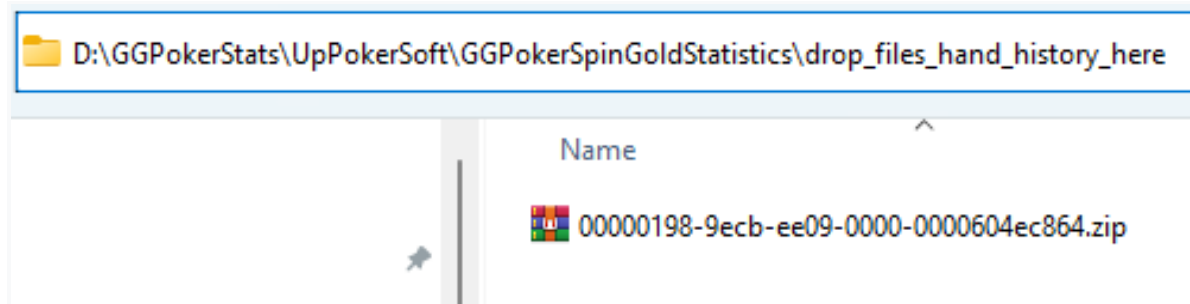

**Remember!** You can download a maximum of 500 game summaries or 20 000 hands at a time. Hand history is stored for 3 months on PokerCraft. Therefore, you can choose a habit, for example, to save your hands in a week.

Copy the file from Windows downloads or via browser downloads and paste downloaded zip file of hand history into our “drop\_files\_hand\_history\_here” folder that we created in the second chapter of the manual.

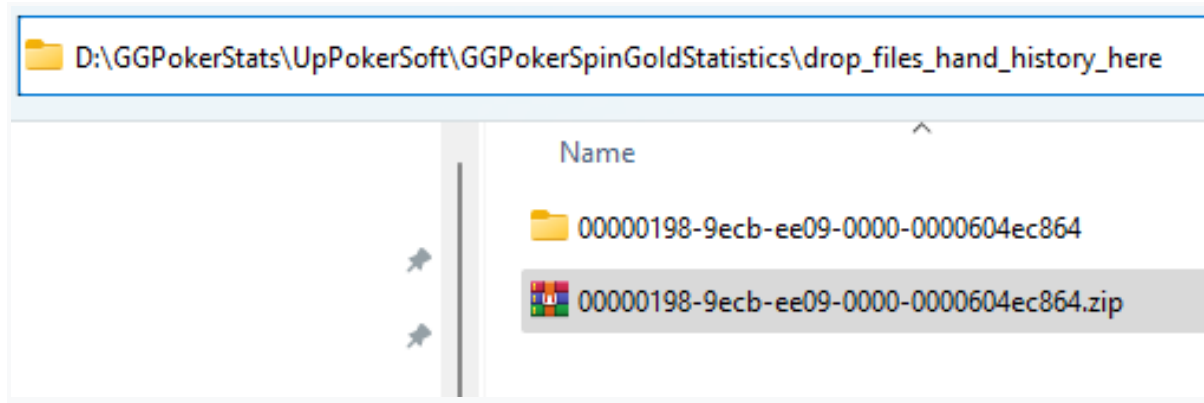

*Pic.11 Standart Downloads*

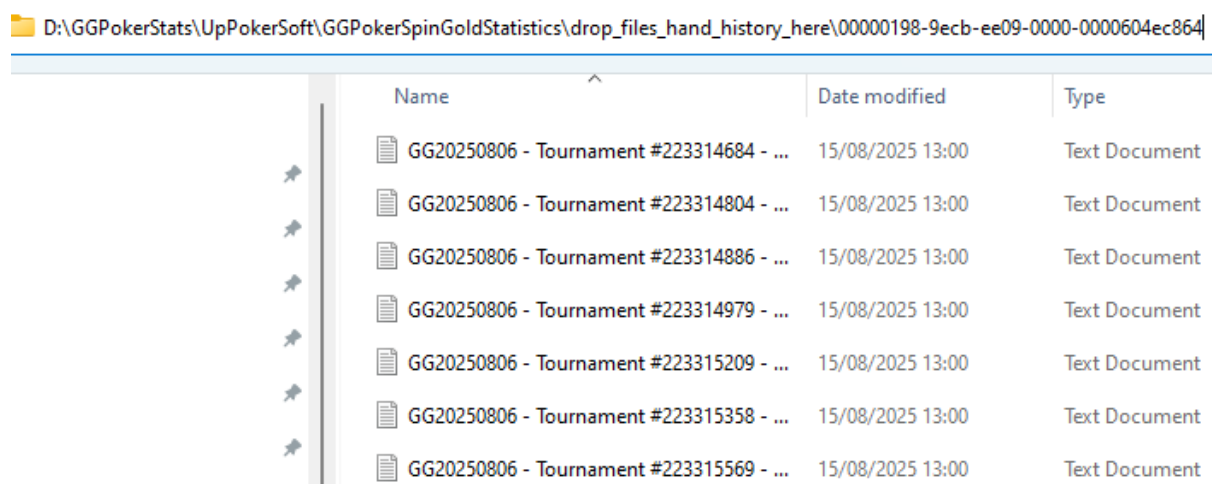

*Pic.12 Our hand history file in  
“drop\_files\_hand\_history\_here” folder*

Then extract all files in this place. You will see something similar to picture “13”.

*Pic.13 Extract .zip folder*

If you go into the extracted folder you will see text files of your hand histories.

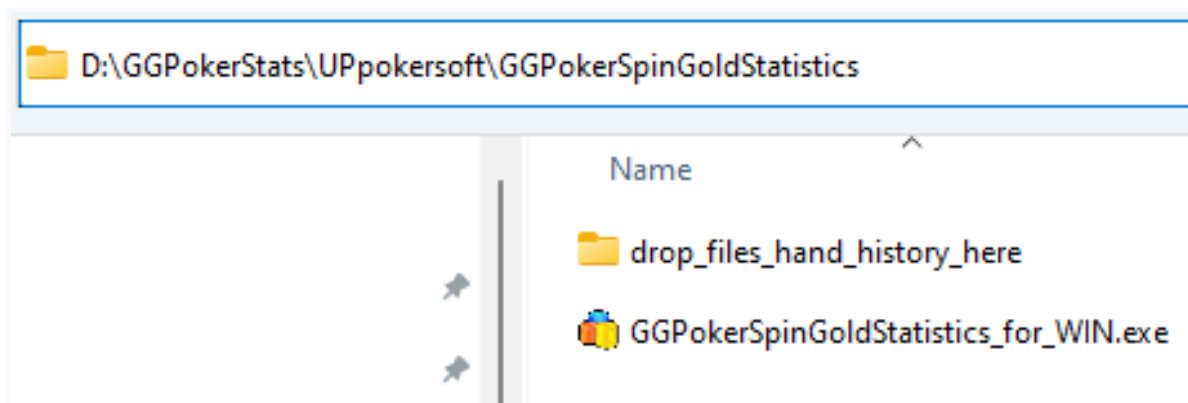

*Pic.14 Text hand history files*

We don't need a .zip file now and you can delete it if you want.

So the general process is repeated if we want to add hands later. Copy the hand history .zip file and extract it here in the “*drop\_files\_hand\_history\_here*” folder.

## 4. Working with the program

So now the final step, we are ready to go to the “*D:\.....\GGPokerSpinGoldStatistics*” folder and click the “*GGPokerSpinGoldStatistics\_for\_WIN.exe*” file.

*Pic.15 Click program .exe file*

The page should load and show your statistics in Spin&Gold 3max and 6max in GGpoker network.

It includes summary statistics for 3-max and 6-max and more detailed statistics for buy-ins and multipliers.

The program only counts the “won multipliers”.

For example, “x8” means you win 8 times your buy-in, and the overall “x10” multiplier is not shown in the statistics.

“x0” means you missed out on the money.

**Remember!** Please note that the program sometimes does not connect the first time through the browser. Just try again and everything will be ok.
